Highlights

Every glyph is **vector and selectable**. Inline styling covers italics, underline, **coloured emphasis**, highlighted runs, an external link, and an internal jump. With no web font in play, the base-14 face still renders Latin-1 & symbols: é ñ ü ß · ± × ½ © ° § ¶ —. Headings use **Roboto Slab**, fetched from Google Fonts on the client.

Ledger by segment

Conditional formatting. Rows below $5M revenue turn red; the money columns are data-color-scale heatmaps that switch their text to white on dark fills. Rows come from DEMO_DATA in browser-demo.js (values in $M).

Segment	Region	Q	Revenue $M	**Profit $M**
Platform	North America	Q1	8.1	**3.9**

Rich table cells

Any cell can stack blocks; rows stay atomic. Brand = embedded image, Scan = vector QR/EAN, H1 trend = a chart, Packages = a nested table.

Account	Brand	Scan	H1 trend	Packages		Revenue
Northwind Retail Enterprise · EMEA				Core Add-ons	14 6	**$1,284,000**
Contoso Health Mid-market · APAC				Core Add-ons	9 2	**$964,000**

After the forced page break

This heading began a new page via break-before: page, proving real pagination. The repeating **pageHeader**/**pageFooter** bands and the running 1/1 tokens resolve per page. Want CJK? Load a Latin and a CJK font above — then mixed text like 陳大文 **test** falls back glyph-by-glyph to whichever registered face covers each character, no font-family needed.

Grand total revenue: $72.1M — produced by pdf-report-engine (no server, no Chromium).
