Hyperlinks & Internal Links

Table of Contents

1. Introduction

This sample demonstrates clickable hyperlinks in the generated PDF. Links are selectable and interactive in any PDF reader.

2. External Links

Visit the pdf-report-engine repository for source code, or read the documentation site.
You can also link to the PDF specification or pdfkit, the library underlying this engine.

3. Internal Navigation

Jump back to the Introduction or go directly to Mixed Usage. Internal links use #anchor targets which become PDF named destinations.

4. Mixed Usage

A single paragraph can contain both: learn about the anchor element or return to External Links for more examples.

All links in this document are fully clickable in any standards-compliant PDF viewer.
