Document Watermark

This document has a declarative **DRAFT** watermark painted diagonally across every page. It is specified via a <meta name="watermark"> tag in the head, uses data-watermark-layer="foreground" to sit on top of the body text, and is rendered as filled vector glyph outlines so it is *not selectable*.

Page 1 Content

The watermark is drawn with 28% opacity and -35° rotation. Because it uses the foreground layer it paints *after* the header, body and footer of every page. Change the attribute to background (or drop it entirely) to place it behind content instead.

Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

Page 2 Content

The watermark appears here too — on every page, always drawn as a filled path. Try to select the " DRAFT" text in your PDF viewer: nothing will highlight, because there are no Tj / TJ operators behind it.

Typical uses:

- Marking documents as **DRAFT**, **CONFIDENTIAL**, or **COPY**
- Watermarking invoices before payment confirmation
- Adding company branding to exported reports without polluting text search
